# Rohith V

B.TECH AI&DS STUDENT

## DETAILS

Hosur, Tamil Nadu

India

8248718609

rohithvandadi07@gmail.com

## TECHNICAL SKILLS

Python
Java
C++
Arduino Uno
HTML
CSS
JavaScript
Software Development
Artificial Intelligence
Machine Learning
IoT Systems
Wireless Communication

## LINKS

LinkedIn

GitHub

## EDUCATION

**Bachelor of Technology (B.Tech) in Computer Science and Engineering, Amrita Vishwa Vidyapeetham, Coimbatore, Coimbatore**

2024 – PRESENT

## PROJECTS

### Denoising Autoencoder for FashionMNIST

NOV 2025 – MAR 2026

**Analysis of Bottleneck Size and Training Noise** Built a denoising autoencoder for FashionMNIST to reconstruct clean images from noisy inputs and analyzed the impact of bottleneck size and noise levels on performance.

### Hybrid GA and MAPPO for Efficient UAV Task Offloading with Enhanced Fairness and Service Coverage

JUL 2025 – OCT 2025

**Technologies: Python, Reinforcement Learning, Optimization Algorithms** Designed a hybrid GA-MAPPO model for multi-UAV task offloading to improve fairness, latency, and service coverage efficiency.

### Hybrid Multi-Modal Malicious URL Detection for Safeguarding Sensor Data in Smart Devices

JUL 2025 – OCT 2025

**Technologies: DistilBERT, 1D CNN, Random Forest, LightGBM, Python** Developed a hybrid malicious URL detection system combining NLP-based embeddings and handcrafted features to enhance IoT security.

### Movie Sentiment Analysis using Machine Learning

JUL 2025 – OCT 2025

**Technologies: Python, Scikit-learn, NLP** Built a text classification model to predict sentiment polarity of movie reviews using TF-IDF and supervised ML algorithms.

### Biofeedback-Powered Smart Arm Exerciser for Rehabilitation

JUL 2025 – OCT 2025

**Technologies: Python, Pygame, IoT Sensors, Raspberry Pi** Designed a biofeedback-driven rehabilitation system integrated with a game simulation to assist patients in performing guided arm exercises with real-time feedback.

### OFDM Image Transmission over Wireless Channel using Adalm-Pluto SDR

JUL 2025 – OCT 2025

**Technologies: MATLAB, Simulink, Adalm-Pluto SDR, OFDM** Simulated and implemented image transmission using Orthogonal Frequency Division Multiplexing (OFDM) over a wireless SDR platform to analyze signal reliability.

### Functional Stochastic Gradient MCMC for Bayesian Neural Networks

JUN 2025 – NOV 2025

**Technologies: Python, TensorFlow, Bayesian Inference** Implemented a Bayesian Neural Network using functional Stochastic Gradient MCMC to estimate posterior distributions, improving model uncertainty quantification.

### Model-Based Deep Unrolled MRI Denoising.

JAN 2026 – MAR 2026

**ADMM-Based Deep Unrolling for MRI Denoising** Developed a hybrid deep learning model combining ADMM optimization and neural networks to remove Rician noise from MRI images while preserving structural details.

### ZDADE – Real-Time Zero-Day Threat Detection System

NOV 2025 – MAR 2026

**Neuro-Symbolic Intrusion Detection using eBPF and LSTM** Developed a real-time zero-day attack detection framework using eBPF kernel monitoring and an LSTM-based neuro-symbolic model to analyze system call sequences and automatically terminate malicious processes.

## ACTIVITIES

Actively building AI-Enhanced Multimodal Phishing Detection, Real-Time AI Cybersecurity Platforms and Building Research into Product-Grade Systems

## SOFT SKILLS

**Teamwork**

**Problem Solving**

**Adaptability**

**Analytical Thinking**

**Communication**

**Eagerness to Learn**
